

Review of UDC Indexing and Available Metadata Fields

February 3, 2009

The following is a list of all metadata fields indexed in the UDC dspace.cfg file.

| | |
|--------------------------------|--|
| Table 1. All indexed fields | search.index.1 = author:dc.contributor.* search.index.2 = author:dc.creator.* search.index.3 = title:dc.title.* search.index.4 = keyword:dc.subject.* search.index.5 = abstract:dc.description.abstract search.index.6 = author:dc.description.statementofresponsibility search.index.7 = series:dc.relation.ispartofseries search.index.8 = abstract:dc.description.tableofcontents search.index.9 = mime:dc.format.mimetype search.index.10 = sponsor:dc.description.sponsorship search.index.11 = identifier:dc.identifier.* search.index.12 = language:dc.language.iso search.index.13 = date:dc.date.issued |
|--------------------------------|--|

The list below represents all of the metadata fields indexed in the UDC dspace.cfg file that are available for data entry during the normal workflow process.

| | |
|--|--|
| Table 2. Indexed, available for input | search.index.1 = author:dc.contributor.* search.index.3 = title:dc.title.* search.index.4 = keyword:dc.subject.* search.index.5 = abstract:dc.description.abstract search.index.7 = series:dc.relation.ispartofseries search.index.10 = sponsor:dc.description.sponsorship search.index.12 = language:dc.language.iso search.index.13 = date:dc.date.issued |
|--|--|

The list below represents all of the metadata fields indexed in the UDC dspace.cfg file that are **not available for data entry** during the normal workflow process.

| | |
|--|--|
| Table 3. Indexed, not available for input | search.index.2 = author:dc.creator.* search.index.6 = author:dc.description.statementofresponsibility search.index.8 = abstract:dc.description.tableofcontents search.index.9 = mime:dc.format.mimetype search.index.11 = identifier:dc.identifier.* |
|--|--|

Note: Some metadata fields are marked with an asterisk (*). This is a truncating symbol that includes any additional qualifiers after the element. For example: Although there is not a metadata field available for **search.index.11 = identifier:dc.identifier.*** during the input process it does index the metadata fields **citation:dc.identifier.citation** and **issn:dc.identifier.issn** which are available for data entry during the normal workflow process but not specifically designated as indexed in the dspace.cfg file.

This final list represents all of the metadata fields **not indexed** in the UDC dspace.cfg file that are available for data entry during the normal workflow process.
